Professional Experience

Full Stack Software Engineer Freelance

08/24 - Present

- Developed and deployed full-stack applications with a focus on user experience, responsive design, and performance optimization, including What to Wear, a clothing recommendation engine based on real-time weather data.
- Built scalable, interactive platforms with front-end and back-end infrastructure, integrating secure authentication, encrypted user data storage, and modular components for easy expansion.
- Optimized SEO and performance to ensure applications rank well in search engines and load efficiently across all devices, improving user engagement and accessibility.
- Integrated third-party APIs (e.g., news aggregation services) to provide dynamic content updates, enhancing functionality and user experience in applications like News Explorer.
- Customer driven web-site design and creation in alignment with user experience

Independent Contractor, Data Annotation

05/24 - Present

- Create complex coding problems to use to train AI models.
- Evaluate and correct code responses generated by AI models.
- Clearly define solutions used and why, creating clear documentation.
- Create and evaluate prompts for use in LLM training.
- Manage complex multi-step conversations.

Team Lead/Manager Multiple Restaurants

Culver's, Newnan GA

02/24 - 04/24

Chick-fil-A, Poplar Rd, Newnan GA

05/19 - 02/24

- Increased productivity, communication, and work culture and environment by acting as a bridge between management and employees through active listening.
- Satisfied guests with speed, efficiency, and accuracy, leading to multiple million-dollar revenue months.
- Trained new employees effectively and quickly, being called the best trainer by several, with compassion and understanding of leaderships' instructions.

Technical Projects

What to Wear | [GitHub](#)

Full Stack Single Page Application utilizing remote machine hosting. Recommends clothing items based on the weather. Users can create accounts with their information securely stored, and post new clothing items for others to see and like.

News Explorer | [GitHub](#)

Front end application with infrastructure and plans to add back end. Dynamic and responsive design to allow users on any device to search for real news articles utilizing 3rd party news API.
